We missed a factor in the Jacobian in the evaluation of the angular integrals in Eqs. (1) and (2) of the paper. The expressions for the integrals $I_1(\mathcal{A}, s)$, $I_2(\mathcal{A}, s)$, and $I_3(\mathcal{A}, s)$ in Eqs. (10), (11), and (12), should be replaced by

$$I_1(\mathcal{A}, s) = \int_0^\infty dz \frac{4z^{is}}{\mathcal{A}(z^2 + 1) + (z - 1)^2} {}_2F_1\left(1; \frac{D-1}{2}; D-1; -\frac{4z}{\mathcal{A}(z^2 + 1) + (z - 1)^2}\right), \quad (10)$$

$$I_2(\mathcal{A}, s) = \int_0^\infty dz \frac{4z^{is}}{2(z-1)z + 1 + 1/\mathcal{A}} {}_2F_1\left(1; \frac{D-1}{2}; D-1; -\frac{4z}{2(z-1)z + 1 + 1/\mathcal{A}}\right), \quad (11)$$

$$I_3(\mathcal{A}, s) = \int_0^\infty dz \frac{4z^{is}}{(z-2)z + 2 + z^2/\mathcal{A}} {}_2F_1\left(1; \frac{D-1}{2}; D-1; -\frac{4z}{(z-2)z + 2 + z^2/\mathcal{A}}\right), \quad (12)$$

where ${}_2F_1(a; b; c; d)$ is the ordinary (Gauss) hypergeometric function. The results and conclusions of the paper remain unchanged. There is no need to redraw any of the figures as the ensuing changes are very minor, imperceptible at the scale the figures were drawn.
