Unfortunately an alteration in proof was incorrectly implemented, leading to an error in Eq. (45). The tildes ($\sim$) should be removed from the symbols in the numerator of Eq. (45). These numerators should denote the actual magnitudes of the quantum-classical differences between the angular momentum components, not the rescaled values (as would be indicated by the tildes). The equation should read as follows:

$$\frac{\delta L_z(t^*)}{\sqrt{l(l+1)}} \leq \frac{\delta L_z^{max}}{\sqrt{l(l+1)}} \sim O(1/l). \quad (45)$$
