In our paper, the definition of entanglement measure [Eq. (19)] for a pure two-qudit system coincides with negativity rather than concurrence. Therefore, the word concurrence, except in Sec. III A where we discussed isotropic states, may be replaced by “negativity.” This negativity is defined in Sec. III B [Eq. (31)] and there shown to be equivalent to the definition of the entanglement measure as used in the paper. We note that it is also possible to recast our discussion of isotropic states in terms of negativity. All results and conclusions of our paper remain unaltered except this change of the name.
