Due to a calibration error, the magnetic fields reported in this paper are 3.2 times smaller than the actual magnetic fields. Therefore, in the first section, the reported magnetic field of 5 G is actually 16 G, and in the section Magnetic Field Dependence Near T_g , the magnetic fields now range between 3.2 and 96 G. We submit the corrected Figs. 6–8. This error does not affect our conclusions.

The authors would like to thank Qiang Zhou and Raymond Orbach for their help in finding this error.

FIG. 6. Variation of TRM decays as a function of magnetic field at temperatures ranging between 25 and 30 K for a 1000-s waiting time. Magnetic fields of 3.2, 6.4, 16, 32, 64, and 96 G were measured.

FIG. 7. Variation of $S(t)$ function (data in Fig. 6) as a function of magnetic field at temperatures ranging between 25 and 30 K for a 1000-s waiting time. Magnetic fields of 3.2, 6.4, 16, 32, 64, and 96 G were measured. Figure 1(b) displays the same data. The inset in Fig. 1(b) shows the three highest temperature data sets on an expanded scale.

FIG. 8. TRM magnetization measurement at $t=0$ s (solid symbols) for the data in Fig. 6.
