An error of a factor of 2 is displayed on the x axis of Fig. 2(d): It should read $B_{\text{total}} = 2 \times 5 = 10$ T instead of $B_{\text{total}} = 5$ T.

In the main text, page 3, paragraph 5, the sentence “For $\nu = 4/3(\nu_{\text{CF}}^* = 2)$, these crossings occur for $B_{\text{total}} \sim 3.4$ T and $B_{\text{total}} \sim 6.8$ T, respectively,” should be replaced with “For $\nu = 4/3(\nu_{\text{CF}}^* = 2)$, these crossings occur for $B_{\text{total}} \sim 6.8$ T and $B_{\text{total}} \sim 13.6$ T, respectively. . . .”

Also, the sentence “The same conclusions are drawn for the $\nu = 5/3(\nu_{\text{CF}}^* = 1)$ FQH state, provided $B_{\text{total}} > 3$ T” should be replaced with “The same conclusions are drawn for the $\nu = 5/3(\nu_{\text{CF}}^* = 1)$ FQH state, provided $B_{\text{total}} > 6$ T.”

None of the interpretations and conclusions of the paper are affected by these errors.
