Misprints in Table II have been discovered in the calculated values of the transition strengths $B(E3; 3_1^- \rightarrow 0_2^+)$, $B(IS1; 0_1^+ \rightarrow 1_1^-)$, and $B(IS1; 0_1^+ \rightarrow 1_2^-)$ of the variation after spin-parity projection (VAP) + α GCM where GCM represents the generator coordinate method result. Other values in the table are correct. The corrected values that supercede those misprints are listed in Table I.

TABLE I. Corrected values of $B(E3)$ and $B(IS1)$ in ^{16}O of the VAP + α GCM result, to replace the misprints in the third column of the original Table II.

$J_i^\pi \rightarrow J_f^\pi$ $B(E3) (e^2\text{fm}^6)$	VAP + α GCM
$3_1^- \rightarrow 0_2^+$	50
$B(IS1) (\text{fm}^6)$	
$0_1^+ \rightarrow 1_1^-$	166
$0_1^+ \rightarrow 1_2^-$	2.9
