DOI: [10.1103/PhysRevC.104.029902](https://doi.org/10.1103/PhysRevC.104.029902)

The experimental $2p$ radioactivity half-lives of ${}^6\text{Be}$, ${}^{12}\text{O}$, and ${}^{16}\text{Ne}$ were misprinted so that the corresponding $\log_{10}HF$ values of the last column are not correct and misprints have also been discovered for the $\log_{10}HF$ values of ${}^{19}\text{Mg}$ and ${}^{45}\text{Fe}$ in our paper. The corrected data are listed in Table I. Nevertheless, the conclusions of our paper are not affected.

We thank Professor X. Li for pointing out the misprints in our paper.

TABLE I. The experimental and calculated $2p$ radioactivity half-lives of the ground-state to ground-state transitions. The $Q_{2p}^{\text{expt.}}$ and $\log_{10}T_{1/2}$ values are measured in MeV and seconds, respectively.

Nuclei	$Q_{2p}^{\text{expt.}}$ (MeV)	$\log_{10}T_{1/2}^{\text{expt.}}$ (s)	$\log_{10}T_{1/2}^{\text{GLDM}}$ (s)	$\log_{10}T_{1/2}^{\text{ELDM}}$ (s)	$\log_{10}T_{1/2}^{\text{for.}}$ (s)	$\log_{10}HF$
${}^6_4\text{Be}$	1.371(5)	$-20.30^{+0.03}_{-0.03}$	$-19.37^{+0.01}_{-0.01}$	-19.97	-21.95	-0.93
