DOI: [10.1103/PhysRevD.95.019901](https://doi.org/10.1103/PhysRevD.95.019901)

There should be no factor of 4 in the denominator of the second line of Eq. (34). The equation should read

$$\begin{aligned}\frac{dI_1}{d\omega} &= \frac{e^2}{4\pi^2 c} \int d^2 n \left(\frac{\mathbf{n} \times \mathbf{v}_1}{c - \mathbf{n} \cdot \mathbf{v}_1} - \frac{\mathbf{n} \times \mathbf{v}_2}{c - \mathbf{n} \cdot \mathbf{v}_2} \right)^2 \\ &= \frac{e^2}{\pi^2 c} \int d^2 n \left[\frac{\mathbf{n} - \mathbf{v}_1/c}{\gamma^{-2} + (\mathbf{n} - \mathbf{v}_1/c)^2} - \frac{\mathbf{n} - \mathbf{v}_2/c}{\gamma^{-2} + (\mathbf{n} - \mathbf{v}_2/c)^2} \right]^2.\end{aligned}$$

In Eq. (66), in the exponents there should be c^{-1} factors:

$$O_{13} = \int d^2 \xi_1 e^{i(\mathbf{v}_2 - \mathbf{v}_1) \cdot \xi_1 / c} \frac{\partial}{\partial \xi_1} K_0(\xi_1 / \gamma) \cdot \int d^2 \xi_3 e^{i(\mathbf{v}_3 - \mathbf{v}_2) \cdot \xi_3 / c} \frac{\partial}{\partial \xi_3} K_0(\xi_3 / \gamma) \Re S_\omega(\xi_1 - \xi_3, t_{21}).$$

There should be an overall minus sign in the second line of Eq. (70):

$$\frac{dI}{d\omega} = \frac{dI_1}{d\omega} + \frac{dI_2}{d\omega} - \frac{2e^2}{\pi^2 c} \int d^2 \xi_1 d^2 \xi_3 (1 - e^{i(\mathbf{v}_1 - \mathbf{v}_2) \cdot \xi_1 / c}) (1 - e^{i(\mathbf{v}_2 - \mathbf{v}_3) \cdot \xi_3 / c}) \frac{\partial}{\partial \xi_1} K_0(\xi_1 / \gamma) \cdot \frac{\partial}{\partial \xi_3} K_0(\xi_3 / \gamma) \Re S_\omega(\xi_1 - \xi_3, t_{21}).$$
