Announcement: *Physical Review E* Scope Description to Include Biological Physics

The editors of *Physical Review E* are pleased to announce that the journal's stated scope has been expanded to explicitly include the term "Biological Physics." With this change, the journal's scope description will be "Statistical, Nonlinear, Biological, and Soft Matter Physics."

Physical Review E publishes a substantial number of papers in its dedicated Biological Physics section. This section is one of only three that were featured when the journal was launched, and that remain to this date. Additionally, all sections of the journal publish research that is inspired by biological or living systems. Biological Physics is a fast growing area, and our goal is to expand its coverage in *Physical Review E*. We believe this expanded scope description gives better visibility to Biological Physics in *Physical Review E*, and the Editorial Board of the journal endorsed this change enthusiastically.
