We have found an unfortunate error in reporting actual parameters used in the simulations. The dimensionless parameters used for all calculations presented in this Letter are $u_0 = 241.8c_s$, $v_0 = 3.72c_s$, $v_* = -48.8c_s$, $\nu = 0.28\omega_{\text{LH}}$, $\sqrt{m_i/m_e} = 427$, which correspond to the following dimensional parameters $E = 10^4$ V/m, $B = 100$ G, $T_e = 17.7$ eV, $v_0 = 15$ km/s, $u_0 = 10^6$ m/s, $\nu = 1.15$ MHz, $v_* = -2 \times 10^5$ m/s, $L_n = 8.8$ mm.

Another related inconsistency is that there has to be a negative sign in front of the drift term $k_y v_*$ in Eq. (4). The drift velocity is negative $v_* = -\rho_e^2 \omega_{ce} / L_n < 0$, and Eq. (1) remains unchanged. Other results and figures remain unchanged.

We thank S. Sadouni and G. Hagelaar for bringing our attention to this mistake.
