A textual error appears in this Letter that incorrectly describes how the participation fraction f_α of the α th normal mode in the glass surface was calculated. The correct expression for this quantity is $f_\alpha = (\sum_j^{N_s} v_{\alpha,j}^2 / \sum_j^N v_{\alpha,j}^2)$, where $v_{\alpha,j}^2$ is the squared amplitude of the contribution of particle j to the eigenvector of the α th normal mode and the sum $\sum_j^{N_s} v_{\alpha,j}^2$ is over the N_s surface atoms only. All numerical results presented are correctly calculated and are unaffected by this textual error.
