Announcement: *Corrections* in *Physical Review* publications

The *Physical Review* journals and *Reviews of Modern Physics* now make *Corrections* of minor errors in published papers. This will end the need for follow-up publication of *Publisher's Notes* and many *Errata* across the *Physical Review* family. We will continue to publish *Errata* for issues that are too involved to be addressed as *Corrections* and/or have significant impact on the scientific content of the paper.

We will indicate *Corrections* on the paper's web page and include the dates. The same information will appear at the end of the PDF version, following the references. If timing allows, we will correct the print version, but we will not correct a printed article after it appears in a print issue. Please note that we will not use *Corrections* to update information that changes following publication, such as author contact information, publication of references, etc. We aim only to ensure that a paper's content accurately reflects the information that was available when the paper was published.

The *Physical Review* journals and *Reviews of Modern Physics* have also partnered with the Crossmark version of record metadata service. Crossmark ensures that the version of a published paper at hand is the most recent and provides additional information about the paper. We hope that contributors and readers find both *Corrections* and Crossmark to be useful.
