Announcement: Short Papers Become Shorter

Short Papers in *Physical Review Special Topics - Physics Education Research* (PRST-PER) are intended for articles that either extend a previous work (by the authors or someone else) or are initial results from a larger effort that are interesting enough to merit this type of publication. In a change aimed to encourage conciseness by authors and thereby enhance readability, the PRST-PER editors and Editorial Board have lowered the length limit of Short Papers from 600 lines, which is approximately five journal pages, to four journal pages. This new limit is the same as that governing Letters published by *Physical Review Letters*.
